

# Keyfort - Data Interchange Service (KDIS) a supply chain visibility service for the Logistics Sector

The purpose of KDIS is to:

1. provide in transit shipment visibility.
2. show order & supplier events.
3. provide timely data access & Dashboard for tactical supply chain decision making.
4. provide software tools to perform historic supply chain analysis for strategic decision making.
5. provide traceability and genealogy analysis at item/lot (pallet) level.
6. provide centralised data access.
7. provide event tracking, work flow visibility and data management features to facilitate collaboration.

KDIS is supplied:

- As a web service in accordance with customer web presentation requirements.
- Software, systems & hardware are held within the Internet Cloud keeping CapEx & OpEx to a minimum.
- With bespoke KDIS interfaces which are developed to utilize existing customer systems and data bases.
- Using secure resilient server and network technology.
- With on demand scalability and billed monthly via DD.
